Introduction

Welcome to the **ZAIZENS Integrated HMS Doctor User Manual**. The Doctor module is the clinical command center for physicians — managing outpatient consultations, diagnostic orders, prescriptions, inpatient care, emergency response, and specialist workflows.

Doctor Portal: Your home at `/portal/doctor` — appointments, OPD queue, new consultations, ER alerts, and quick links to prescriptions, patients, and laboratory.

1. Doctor Overview & Roles

The **Doctor module** supports the full physician pathway across OPD, IPD, Emergency, Maternity, and telemedicine contexts.

**Physician / Consultant**
Consultations, diagnoses, orders, prescriptions, admissions, ward rounds, discharge

**Specialist**
Specialist consultation fees, referrals, department-specific care

**Nurse**
Triage, vitals, medication administration — supports doctor workflow

**Cashier**
Consultation payment before OPD visit; order payment codes on completion

**Front Desk**
Registration, queue, consultation room assignment

**Patient**
Pays consultation fee, receives care, collects results and prescriptions

medications

2. Clinical Consultation Workflow

Register → Pay consultation → Nurse triage & vitals
→ Waiting doctor → Consultation (SOAP) → Orders → Complete
→ Cashier (order payment) → Lab / Rad / Pharmacy

Standard OPD pathway

- 1 Patient registers at front desk — pays consultation fee at cashier.
- 2 Nurse records triage vitals — status **WAITING DOCTOR** .
- 3 Doctor opens patient from OPD queue or **New Consultation**.
- 4 Document SOAP: complaint, history, examination, diagnosis, plan.
- 5 Add lab tests, radiology exams, medications as needed.
- 6 Mark follow-up eligibility if applicable.
- 7 **Complete consultation** — orders sent to cashier queue.
- 8 Patient pays for orders at cashier; visits departments with payment codes.

Payment gate: Standard OPD requires consultation payment before doctor sees patient. Emergency waiver available for acute cases.

3. Doctor Portal

The revamped **Doctor Portal** at `/portal/doctor` centralizes daily clinical work.

Hero banner

Welcome message with department, date, and primary actions: Workflow Guide, New Consultation, ER Alerts, OPD Queue.

KPI strip

- **My Appts Today** — scheduled appointments
- **My Consultations** — completed today
- **OPD in Queue** — patients waiting for doctor
- **Total Patients** — patients under your care

Quick link tiles

 ER board	 ER alerts	 New consult	 OPD queue
 Prescriptions	 Patients	 Appointments	 Laboratory

My Appointments

Tabs: **Pending** (confirm/decline) · **Confirmed** (start consultation). Supports in-person and telemedicine visit types.

Recent consultations

Quick access to today's completed visits — open chart or edit consultation.

4. Starting a Consultation

From OPD queue

- 1 Open `/opd-queue` — filter Waiting Doctor.
- 2 Click patient row → **Start consultation**.
- 3 System validates payment code and opens consultation form.

New consultation picker

`/consultation-new` lists patients ready for consultation today. Select patient to open SOAP form.

From patient chart

Open chart → **Create consultation** or **Edit consultation** when active visit exists.

Consultation room

Assign physical consultation room from OPD queue or patient card. Default room may auto-fill from doctor's configured seat.

Retake vitals

If vitals need updating, use **Retake vitals** — sends patient back to queue for nursing to record new measurements.

5. SOAP Documentation

Structured clinical documentation using the SOAP framework:

S — Subjective Chief complaint, history	O — Objective Examination, vitals review
A — Assessment Diagnosis, impression	P — Plan Treatment, follow-up

Fields

- **Chief complaint** — why patient presented
- **History / Subjective** — present illness, past history, review of systems
- **Examination / Objective** — physical findings; review nurse vitals (BP, pulse, temp, SpO₂, weight)
- **Assessment / Diagnosis** — working diagnosis; pick from common list or free text
- **Plan** — treatment, patient education, numbered plan items

Complete vs update

Complete consultation finalizes the visit and releases orders to cashier. **Update consultation** saves draft changes while visit in progress.

SOAP pick lists provide common entries — selection inserts into notes; type freely for additional detail.

6. Diagnostic Orders

Laboratory tests

Search hospital lab catalog — click to add tests. Custom/non-catalog tests available when not in standard list. Numbered order lines sent to laboratory queue on completion.

Radiology imaging

Search radiology catalog — X-ray, ultrasound, CT, MRI, etc. Custom exams for studies not in catalog. Orders appear on radiology worklist after patient payment.

External care

Mark services performed outside hospital — patient obtains externally; document on chart without in-house processing.

Order workflow after completion

- 1 Doctor completes consultation with orders.
- 2 Orders appear on cashier billing panel.
- 3 Patient pays at cashier — receives LAB/RAD/PHA service codes.
- 4 Departments verify codes and process orders.
- 5 Results return to patient chart — doctor reviews.

Lab and radiology cannot process unpaid orders. Patient must pay at cashier first.

7. Prescriptions

During consultation

Medications section — search pharmacy catalog or enter custom drug:

- Drug name, dosage, frequency, duration, quantity
- Catalog items with prices; custom drugs for off-catalog medications
- Pharmacist may need to confirm off-catalog availability and price

Prescription registry

Standalone prescriptions at </prescriptions> — requires active consultation for OPD patients unless IPD/ER/follow-up rules apply.

Print prescription

Print Rx copy for patient from consultation or prescription registry — includes PHA codes for pharmacy dispensing.

IPD medications

Prescribe on IPD medication chart — nurse administers scheduled doses on ward.

8. Follow-Up Consultations

Returning patients may qualify for follow-up under existing payment code:

- Doctor documents **follow-up eligibility** during consultation
- Set **next consultation interval** for payment validity
- Patient uses Follow Up path from chart or OPD queue when within validity window
- Otherwise new consultation payment required

Follow-up checkbox

Check **Patient may return for follow-up consultation** to allow reuse of payment code per validity rules configured in Settings → Payment validity.

See **OPD User Manual** (</docs/opd-users-manual>) for front desk and cashier follow-up flows.

9. Appointments & Telemedicine

Online booking

Patients book appointments via patient portal — appear on Doctor Portal as pending requests.

Confirm / decline

- 1 Review pending appointment on Doctor Portal.
- 2 **Confirm** — moves to confirmed tab; patient notified.
- 3 **Decline** — optional reason; patient may rebook.

Visit types

IN-PERSON **TELEMEDICINE**

Teleconsultation

Video consultation requires cashier payment code. Doctor confirms appointment before visit. Meeting room link on confirmed appointment.

Start from appointment

Confirmed appointments → **Start consultation** opens SOAP form with patient prefilled.

10. Emergency Physician Workflow

Emergency/A&E physician pathway:

- 1 Patient arrives — may bypass OPD prepayment with emergency waiver.
- 2 Doctor assigned on ER board — receives ER alert notification.
- 3 Open ER chart — document assessment parallel to nursing vitals.
- 4 Place orders on credit tab — lab, rad, pharmacy, procedures.
- 5 Stabilize and determine disposition: admit, transfer, or discharge.
- 6 Issue clinical discharge when fit — retrospective billing at cashier.

ER board at `/emergency` — acuity levels, door-to-doctor metrics, disposition tracking.

ER alerts inbox at `/portal/doctor/er-alerts` — new arrivals, awaiting doctor, critical updates.

See **Emergency User Manual** (`/docs/emergency-users-manual`) for full ER workflow.

11. IPD Admissions & Ward Rounds

Admission request

From consultation or patient chart when hospitalization needed:

1 Check **Recommend IPD admission** on consultation form.

2 Enter admission indication / admitting diagnosis.

3 Submit — triggers IPD workflow.

4 Cashier collects admission deposit.

5 ADT assigns ward and bed on ward board.

6 Nurse receives patient — baseline vitals and care plan.

Ward rounds

`/ipd/ward-rounds` — daily review of inpatients:

- Update clinical notes per patient
- Review lab, radiology, pharmacy results
- Place new orders on running credit tab
- Adjust medications on IPD chart

During stay

Doctor ward rounds, nursing care, diagnostic orders, IPD medication administration — all charges accumulate on running bill.

See **IPD User Manual** (`/docs/ipd-users-manual`) for full inpatient lifecycle.

12. Clinical Discharge

When patient is medically fit to leave:

- 1 Review final results and pending treatments.
- 2 Write **discharge summary** — diagnosis, course, medications, follow-up instructions.
- 3 Issue **Clinical Discharge** on IPD chart.
- 4 Cashier performs financial discharge — final bill settlement.
- 5 ADT confirms departure — bed released for housekeeping.

Both clinical and financial discharge are mandatory before patient physically leaves hospital.

Death registry

Document in-hospital deaths per policy at `/ipd/death-registry` when applicable.

13. Maternity & Obstetric Care

Obstetric physicians use integrated maternity workflows:

- ANC consultations and obstetric assessments
- Antenatal orders — lab, ultrasound, supplements
- Labor ward management — partograph, delivery documentation
- Postnatal ward rounds and newborn care orders
- Referral to NICU when indicated

See **Maternity User Manual** (</docs/maternity-users-manual>) for ANC registry, partograph, and delivery documentation.

14. Patient Chart

Central clinical record at `/patient-chart/:id` :

- Demographics, allergies, problem list
- Vitals history and trends
- Consultations (SOAP notes)
- Lab, radiology, pathology results
- Prescriptions and medication history
- IPD admissions and ward notes
- Documents and attachments
- Follow-up eligibility and payment validity

Open from Doctor Portal recent consultations, OPD queue, appointments, or patient search.

15. ER Alerts Inbox

`/portal/doctor/er-alerts` — dedicated inbox for emergency notifications:

- New patient arrivals assigned to you
- Patients awaiting doctor after triage
- Critical updates on active ER visits
- Acknowledge alerts when chart opened

ER alerts strip on Doctor Portal header shows unacknowledged count when alerts pending.

16. Doctor Roster

View duty schedules at `/doctor-roster` :

- **Day / Week / Month** views
- Shift assignments and on-call coverage
- Administrators save and copy rosters between dates

Permission: `doctor_duty.read` view · admin save rosters.

17. Visiting Doctors

External specialists and locum physicians via **Visiting Doctor** module:

- Profile setup at `/visiting-doctor/setup`
- My visit dashboard for session documentation
- Claims and administrative workflows for visiting staff
- Integration with main doctor portal for assigned visits

Visiting doctor banner appears on Doctor Portal when active visit session configured.

18. Module Integration

Module	Doctor touchpoint
OPD	Consultations, queue, follow-up
Cashier	Consultation fee, order payment codes
Nursing	Triage vitals before consultation
Lab / Radiology	Order tests; review results on chart
Pharmacy	Prescribe medications; patient collects at pharmacy
IPD	Admit, ward rounds, clinical discharge
Emergency	Acute assessment, credit-tab orders
Maternity	ANC, labor, postnatal care

Related manuals: OPD, IPD, Emergency, Maternity, Nursing, Pharmacy, Lab, Radiology, Cashier — all at [/docs/*-users-manual](#) .

20. Troubleshooting

Issue	Solution
Cannot start consultation	Verify patient paid consultation fee; check payment code validity
Patient not on consultation-new list	Ensure registered on OPD queue with vitals completed
Orders not appearing at cashier	Complete consultation — draft orders not released until finalized
Cannot prescribe without consultation	Create SOAP consultation first; IPD/ER have separate rules
Follow-up rejected at front desk	Document follow-up eligibility; check validity interval expired
Specialist fee mismatch	Cashier must assign matching specialist doctor at prepay
Lab/rad won't process order	Patient must pay at cashier for order lines first
Cannot issue admission	Complete consultation with admission recommendation
Clinical discharge blocked	Resolve pending critical results or treatments first
Telemedicine won't start	Confirm appointment; verify teleconsultation payment code entered

21. Glossary

Term	Definition
SOAP	Subjective, Objective, Assessment, Plan — clinical note structure
Consultation	Doctor-patient encounter documented on OPD visit
OPD queue	Outpatient visit tracking from registration to completion
Payment code	Cashier-issued ticket for consultation or orders
Follow-up	Return visit under existing payment validity rules
Credit tab	Running unpaid charges during IPD/ER stay
Ward round	Daily inpatient review by doctor
Clinical discharge	Doctor declaration patient medically fit to leave
Admission request	Doctor order to begin IPD hospitalization
Telemedicine	Remote video consultation with payment code
External care	Services obtained outside hospital — documented only
