Introduction

Welcome to the **ZAIZENS Integrated HMS Nursing User Manual**. The Nursing module supports front-line clinical care — from OPD triage and vital signs through inpatient ward management, medication administration, supply requisitions, and emergency response.

Nurse Station: Your home portal at </portal/nurse> (hub: </portal/hub/nursing>) with KPIs, OPD activity, emergency panel, and quick links to vitals, queue, and ward board.

1. Nursing Overview & Roles

The **Nursing module** connects bedside care to the hospital information system across OPD, IPD, Emergency, Maternity, and community outreach contexts.

Registered Nurse
Triage, vitals, ward care, medication administration, patient education

Nursing Aid / Assistant
Vitals, patient positioning, basic care under nurse supervision

Doctor
Orders care plans, medications, investigations; ward rounds

Front Desk / ADT
Patient registration, queue management, bed assignment

Pharmacist
Fulfills nursing supply requests; dispenses medications

Patient
Receives triage, vitals monitoring, treatments, and discharge education

2. Clinical Nursing Workflow

Patient arrives → Register / queue → Nurse triage & vitals
→ Waiting doctor → Consultation & orders → Cashier (if OPD)
→ Nursing care / IPD admission / ER treatment → Discharge

Standard OPD pathway

- 1 Front desk registers patient — status **REGISTERED** .
- 2 Nurse locates patient on OPD queue or Nurse Station.
- 3 Click **Triage** — opens vitals form with patient prefilled.
- 4 Enter BP, temperature, weight, SpO₂, pulse, chief complaint notes.
- 5 Save — status moves to **WAITING DOCTOR** .
- 6 Doctor consults, orders lab/rad/pharmacy as needed.
- 7 Patient pays at cashier if required; returns for nursing instructions or procedures.

IPD pathway

After doctor admission request and cashier deposit: ADT assigns bed on ward board → nurse receives patient → baseline vitals → execute care plan and medication chart.

Emergency exception: ER patients receive immediate nursing assessment and vitals while doctor begins treatment — payment is retrospective.

3. Nurse Station Portal

The **Nurse Station** portal is the nursing team's command center.

KPI strip

- **Patients Today** — OPD visits scheduled or checked in today
- **Pending Triage** — registered patients awaiting vitals
- **Beds Occupied** — current inpatient census
- **Total Patients** — active patients in system scope

Quick actions

- **Pharmacy requests** — nursing supply requisitions
- **OPD Queue** — live queue with triage buttons
- **Ward Board** — IPD bed map and admissions
- **Record Vitals** — direct vitals entry
- **Workflow Guide** — role-specific step-by-step help

Today's activity panel

Recent OPD visits with status badges, chief complaint, check-in time, and triage/chart action buttons.

Emergency side panel

Active ER visits requiring nursing attention — red-highlighted card with patient list and quick links.

Portal tiles provide shortcuts to clinical tools configured for nursing role.

4. OPD Queue & Triage

The **OPD queue** at `/opd-queue` shows all outpatient visits with real-time status.

Queue statuses

REGISTERED

TRIAGE

WAITING DOCTOR

COMPLETED

Triage workflow

- 1 Open OPD queue from Nurse Station or sidebar.
- 2 Filter or scan for patients with status Registered or Triage.
- 3 Click **Triage** on patient row — redirects to vitals with visit ID.
- 4 Complete vitals form and save.
- 5 Patient automatically advances to Waiting Doctor on queue.

Consultation rooms

Front desk or nursing may assign a physical consultation room on the patient card. Rooms configured under Settings → Room configuration.

Carry-forward visits

Returning patients within validity window may skip new consultation payment — nurse verifies follow-up eligibility on chart before triage.

5. Recording Vitals

The **Vitals Registry** at `/nursing/vitals` captures structured vital signs for clinical pre-assessment.

Vital sign groups

 BP / Pulse	 Temperature	 Weight
 SpO ₂	 Height	 GCS (ER)

- 1 Select patient from dropdown (or prefilled from queue triage link).
- 2 Enter cardiovascular: systolic/diastolic BP, pulse rate.
- 3 Enter temperature (°C) and weight (kg).
- 4 Enter SpO₂ percentage if pulse oximetry available.
- 5 Add nursing notes or pain score if configured.
- 6 Save — vitals written to patient chart and linked OPD visit.

IPD vitals

From ward board or IPD admission, record baseline vitals on admission and scheduled monitoring per care plan.

Access control

Doctors cannot save vitals through nursing station forms — vitals entry is restricted to nursing roles per clinical business rules.

Use deep links: `/nursing/vitals?patient_id=...&opd_visit_id=...&redirect_to=/opd-queue` for seamless queue return.

6. Ward Board & IPD Care

The **Ward Board** at `/wards` is the central IPD bed management and nursing operations view.

Bed map

Wards grouped with bed status: Available · Occupied · Reserved · Housekeeping. Color-coded cards show patient name, length of stay, running bill summary.

Active admissions panel

- Patient name, ward, bed label
- IPD status, admitting department
- Length of stay (days)
- Running bill and deposit amounts

Pending bed assignment

Admissions awaiting bed placement after doctor request and cashier deposit — ADT assigns ward and bed.

Nursing actions on ward board

- 1 Receive newly admitted patient to assigned bed.
- 2 Record admission baseline vitals.
- 3 Review doctor orders and nursing care plan.
- 4 Open IPD medication chart for scheduled doses.
- 5 Submit nursing supply requests for ward stock.
- 6 Document nursing notes on patient chart.
- 7 Support clinical discharge workflow when doctor marks patient fit.

Bed lifecycle

Available → Occupied (admit) → Housekeeping (discharge) → Available (bed ready). Nurse or ADT marks bed ready after cleaning.

7. IPD Medication Administration

The **IPD medication module** at `/ipd/medication` manages scheduled drug administration.

Medication chart

- Doctor-prescribed medications with dosage, route, frequency
- Scheduled dose times — due, administered, missed
- Nurse administration with timestamp and initials

Administering a dose

- 1 Open patient from ward board or medication module.
- 2 Locate due dose in today's schedule (24h window centered on now).
- 3 Verify patient identity and medication against chart.
- 4 Click **Administer** — record time and optional nurse comment.
- 5 Dose locked in audit trail — cannot be undone without supervisor correction.

Missed doses

Mark dose as missed with reason (patient refused, NPO, unavailable, etc.) — documented for doctor review.

Corrections

Supervisor may correct administration record with audit reason — original entry preserved in history.

Only users with nursing.write permission can administer doses — system enforces role check.

8. Nursing Supply Requests

Ward nurses requisition supplies from pharmacy via **Nursing Supply Requests** (</nursing/supply-requests>).

- 1 Open supply requests from Nurse Station or ward board link.
- 2 Click **New request** — add line items from inventory catalog.
- 3 Specify quantity and remarks per item.
- 4 Link to admission/ward/patient if context available.
- 5 Submit — request appears in pharmacy nursing-requests queue.
- 6 Pharmacy marks preparing → dispenses → nurse acknowledges receipt.

Request statuses

Pending · Preparing · Ready · Fulfilled · Cancelled

Pharmacy portal shows badge count when nursing requests are pending.

9. Handover & Nursing Reports

Structured shift handover at `/ipd/handover` ensures continuity of care between nursing shifts.

Shift report

- Current shift nurse documents patient status
- Outstanding tasks and critical observations
- Next shift nurse assignment
- Lock report when shift ends — audit trail preserved

IPD nurse inbox

Messages and alerts for nursing staff at `/ipd/inbox` — doctor orders, pending tasks, department notifications.

Nursing notes

Document interventions, patient response, and education on patient chart — visible to clinical team.

10. Emergency Nursing

Emergency/A&E nursing follows a rapid assessment pathway:

- 1 Patient arrives — may bypass OPD registration prepayment.
- 2 Nurse performs immediate triage — vitals including GCS if indicated.
- 3 Doctor begins parallel assessment and treatment.
- 4 Orders placed on ER credit tab — lab, rad, pharmacy alerts to departments.
- 5 Nursing executes orders: IV access, medications, monitoring.
- 6 Disposition when stable — admission, transfer, or discharge.
- 7 Retrospective billing at cashier after care.

Emergency panel on Nurse Station shows active ER patients requiring attention.

Life-threatening cases: use Emergency / Waiver on registration to bypass prepayment gate when policy allows.

11. Maternity & Obstetric Nursing

Obstetric nursing integrates with Maternity module workflows:

- ANC visits — vitals, fundal height, fetal heart rate documentation
- Labor ward — partograph monitoring, contraction timing, cervical assessment
- Delivery suite support — newborn initial care, Apgar documentation
- Postnatal ward — maternal recovery vitals, breastfeeding support
- NICU nursing — neonatal vitals and feeding charts when applicable

See **Maternity User Manual** (</docs/maternity-users-manual>) for full obstetric pathway.

12. Clinical Department Alerts

Nursing responds to cross-department alerts for pending clinical orders:

- **Lab alerts** — specimen collection, pending tests
- **Radiology alerts** — patient transport to imaging
- **Pharmacy alerts** — medication ready for ward delivery
- **IPD inbox** — doctor messages and care plan updates

Clinical department alerts strip appears on relevant portal pages when items need nursing action.

13. Nurse Roster

View and manage duty schedules at `/nurse-roster` .

Views

- **Day** — single day shift assignments
- **Week** — weekly grid
- **Month** — calendar overview

Permissions

`nurse_duty.read` view roster · Administrators save and copy rosters between dates.

Staff can check their assigned shifts before reporting to Nurse Station or ward.

14. Patient Chart Access

Nurses access the full clinical record at `/patient-chart/:id` :

- Vitals history and trends
- Active medications and allergies
- Doctor orders and nursing care plan
- Lab, radiology, and pharmacy results
- Admission and discharge summaries
- Nursing notes and handover reports

From OPD queue or ward board, click **Chart** to open patient record in context.

15. Module Integration

Module	Nursing touchpoint
OPD	Triage, vitals, queue management
IPD	Ward board, medication chart, handover
Emergency	Rapid triage, credit-tab orders
Maternity	ANC, labor, postnatal care
Pharmacy	Supply requests, medication dispensing support
Lab / Radiology	Specimen collection, patient escort
Cashier	OPD prepayment before doctor (standard flow)
Front Desk	Registration, room assignment, bed allocation

Related manuals: **IPD** (</docs/ipd-users-manual>), **Emergency** (</docs/emergency-users-manual>), **Pharmacy** (</docs/pharmacy-users-manual>).

17. Troubleshooting

Issue	Solution
Cannot save vitals	Verify nursing.write permission; doctors use separate clinical note paths
Patient stuck on Registered	Complete triage vitals to advance queue status
No patient in vitals dropdown	Register patient first; use patient_id query param from queue
Cannot administer IPD dose	Check nursing.write role; verify dose is due in schedule window
Supply request rejected	Verify inventory item exists; check stock levels in inventory module
Bed shows occupied after discharge	Confirm financial discharge at cashier; mark bed ready for housekeeping
Follow-up patient charged again	Verify doctor marked follow-up eligible and payment validity passes
ER patient not on nursing panel	Confirm ER registration and triage completed on ER board
Cannot view roster	Request nurse_duty.read permission from administrator

18. Glossary

Term	Definition
Triage	Initial nursing assessment including vitals before doctor consultation
Vitals	Vital signs: BP, pulse, temperature, SpO ₂ , weight, etc.
OPD queue	Outpatient visit tracking from registration to completion
Ward board	IPD bed map and admission management at /wards
ADT	Admission, Discharge, Transfer — bed and ward management
Care plan	Nursing interventions ordered by doctor for inpatient care
Med chart	Scheduled medication administration record for IPD
Handover	Shift report transferring patient care between nurses
Supply request	Ward requisition fulfilled by pharmacy
GCS	Glasgow Coma Scale — neurological assessment in emergency
Credit tab	Running unpaid charges during ER/IPD stay
