Introduction

Welcome to the **ZAIZENS Integrated HMS OPD User's Manual**. This document explains the full outpatient journey — from patient arrival through consultation, investigations, pharmacy, and visit completion.

Who should read this: Front Desk, Cashier, Nurses, Nursing Aids, Doctors, and supervisors who manage the OPD queue at /opd-queue .

1. OPD Overview & Roles

The **Outpatient Department (OPD)** manages same-day patient visits. Standard flow: patient pays consultation fee → Front Desk adds visit to queue → Nurse records vitals → Doctor consults → patient pays for orders → Lab/Radiology/Pharmacy process → Doctor completes visit.

Front Desk

Register patients, add OPD visits, assign rooms, route to cashier

Cashier

Collect consultation fee and order payments; issue receipts & payment codes

Nurse / Nursing Aid

Triage, record vitals (BP, temp, weight, SpO₂, pulse)

Doctor

Consultation, diagnosis, orders, prescriptions, complete visit

Lab / Radiology

Verify payment codes, enter results, finalise reports

Pharmacy

Dispense paid prescriptions; OPD medication alerts

Key URLs

Screen	Path	Typical roles
OPD Queue	/opd-queue	Front Desk, Nurse, Doctor
Front Desk portal	/portal/front-desk	Front Desk
Nurse portal	/portal/nurse	Nurse
Doctor portal	/portal/doctor	Doctor
Cashier	/cashier	Cashier
New consultation	/consultation-new	Doctor
Waiting screen (TV)	/hms/waiting-screen	Lobby display
Room configuration	/admin/consultation-rooms	Admin, Director

Permissions: Menus and actions depend on your role. Required permissions include `opd.read` `opd.write` `nursing.write` `clinical.write` `cashier.write` .

2. Eleven-Station OPD Workflow

The OPD workflow banner on the queue page shows the patient journey through **11 stations**. Existing patients may skip registration; new patients register first.

Patient Arrives → Front Desk Check-in → [Registration if new] → Cashier (Consult Fee) → Front Desk (Add to OPD Queue) → Nurse (Triage/Vitals) → Doctor (Consultation) → [Orders?] → Cashier (Pay Orders) → Lab / Radiology → Doctor (Review) → Pharmacy → Completed

Step-by-step (all roles)

- 1 Cashier** — Collect consultation fee. Issue receipt to patient. `cashier.write`
- 2 Front Desk** — Register patient. Add to OPD Queue under correct department. `opd.write`
- 3 Nurse** — Select patient. Record vitals: BP, Temp, Weight, SpO₂, Pulse. Status → Waiting Doctor. `nursing.write`
- 4 Doctor** — Open consultation. Record notes, diagnosis, orders (lab/imaging/prescriptions). `consult.write`
- 5 Cashier** — Patient pays for all investigation and medication orders before processing.
- 6 Lab / Radiology** — Run tests; upload results to patient chart.
- 7 Pharmacist** — Dispense paid prescriptions.
- 8 Doctor** — Review results. Finalize diagnosis. Mark visit Completed.

Footnote: Station 2 — Existing patients skip to Station 4 (Cashier). New patients go to Station 3 (Registration) first. After payment → Station 5 (OPD Queue).

3. Visit Statuses

Each OPD visit progresses through defined queue statuses. Cards on `/opd-queue` show the current status with color-coded badges.

Status	Meaning	Next action
REGISTERED	Visit added to queue; payment may be pending	Nurse starts triage / vitals
TRIAGE	Vitals in progress	Complete vitals → Waiting Doctor
WAITING DOCTOR	Vitals recorded; patient waiting	Doctor opens consultation
IN CONSULTATION	Doctor actively consulting	Record orders; advance status
ORDERS PENDING	Orders placed; payment/processing needed	Cashier payment → departments
BILLING	Final billing stage	Settle charges; complete visit
COMPLETED	Visit finished	—
CANCELLED	Visit cancelled	—

Registered → Triage → Waiting Doctor → In Consultation → Orders Pending → Billing → Completed

Carry-forward rule

Patients **not consulted yesterday** are automatically returned to today's active queue each morning with a **renewed queue number** (first in line). Use **Return to today's queue** from the visit menu when needed.

4. Front Desk Procedures

Opening the OPD queue

1. Sign in and open **Clinical** → **OPD queue** or `/opd-queue`.
2. Review **Active Queue — Today** for current visits.
3. Use + **New Visit** to add a patient after consultation fee is paid.

Adding a new visit

- 1 Confirm patient paid **consultation fee** at cashier (unless emergency waiver).
- 2 Click + **New Visit** on OPD queue.
- 3 Search and select the patient.
- 4 Choose **department** and referring doctor if applicable.
- 5 Save — patient receives a **queue number** and status *Registered*.

Existing vs new patients

- **Existing patients** — Front Desk check-in only; skip registration.
- **New patients** — Register via `/patients` first (demographics, contact, ID).

Visit registry & filters

The **Visit Registry** section lists historical visits. Filter by name, ticket, date range, status, or department. Sort newest/oldest as needed.

Emergency visits: Tick **Emergency / Waiver** at registration to bypass consultation prepayment. See Emergency module guide for full A&E workflow.

5. Cashier & Payment Codes

Consultation fee (OPD entry)

Standard OPD: patient pays **consultation fee first**, then returns to Front Desk for queue registration. Without valid payment, vitals and consultation may be blocked.

Payment codes

Each paid service generates an alphanumeric **payment code** (e.g. `CON-4829-K7HM3R9Q`). Codes are used to:

- Verify payment before lab, radiology, or pharmacy
- Track partial payments on multi-line tickets
- Support follow-up consultations within validity rules

Collecting payment for orders

- 1 Patient returns from doctor with new orders.
- 2 Load payment code at `/cashier` or Cashier portal.
- 3 Review line items (lab, radiology, pharmacy, procedures).
- 4 Accept full or **partial payment** — balance stays on same code.
- 5 Print receipt; patient proceeds to departments.

Insurance co-pay

When insurance is on the patient chart, the cashier applies configured **insurer share %** automatically.

6. Nursing & Triage

Starting triage

- 1 On OPD queue, locate the patient card (status *Registered*).
- 2 Click **Start Triage** or **Triage / Vitals**.
- 3 If payment is invalid, system shows **Payment required** — send patient to cashier first.
- 4 Enter vitals: blood pressure, temperature, weight, SpO₂, pulse rate.
- 5 Save — status advances to **Waiting Doctor**.

Vitals on the card

After recording, the card shows vitals timestamp. Nurses cannot edit vitals once the patient is in consultation or waiting for doctor (locked state).

Optional vitals

Vitals may be optional for some workflows, but doctors typically require them before consultation opens. Front Desk staff without clinical write permission see queue cards in read-only mode.

Assign consultation room

Nursing or Front Desk can assign a physical room from the patient card when rooms are configured. Room appears on waiting-screen TV.

7. Doctor Consultation

Opening a consultation

- 1 From OPD queue, click **Consult** on your assigned patient (or unassigned queue).
- 2 System opens `/consultation-new` with patient and visit context.
- 3 Record chief complaint, history, examination, diagnosis.
- 4 Add orders: laboratory, radiology, prescriptions, procedures.
- 5 Mark *external* when care is outside the hospital.
- 6 Complete consultation — payment code generated for new orders if applicable.

Doctor-assigned queue split

When enabled, doctors see **Assigned to you** separately from other physicians and unassigned visits. Your patients' cards highlight with a green border.

Consultation prerequisites

- Valid consultation payment (or emergency waiver)
- Vitals recorded (for statuses triage / waiting doctor)
- Patient not already completed or cancelled

Follow-up vs new consultation

Returning patients may qualify for **Follow Up** under prior payment code if documented and validity rules pass. Otherwise patient needs new consultation payment — use **New Consultation (payment)**.

8. Lab, Radiology & Pharmacy

After doctor orders

- 1 Patient pays at cashier (Station 8).
- 2 Lab technician verifies payment code → enters results → finalises.
- 3 Radiologist verifies code → uploads report → finalises.
- 4 Pharmacist dispenses paid prescriptions.
- 5 Doctor reviews results on chart and advances visit toward completion.

Unpaid orders: Lab and radiology cannot process unpaid orders. Send patient to cashier first.

OPD orders billing modal

Doctors and cashiers can open the **Orders bill** modal from the visit card to review line items, refunds, or consolidated billing for the visit.

9. Consultation Rooms

Physical consultation rooms link to doctors and display on OPD cards and the lobby waiting screen.

Configure rooms (Admin)

1. Open **Settings** → **Room configuration** (`/admin/consultation-rooms`).
2. Add room: code (e.g. R1), display name, department, sort order.
3. Assign doctors who use that room.

Assign on visit

From the patient card menu: **Assign consultation room**. Override auto-detected room for this visit. Waiting screen shows room and queue number.

10. Follow-Up Visits

Follow-up allows a returning patient to consult without a new consultation fee when:

- Prior visit documented follow-up eligibility
- Payment code still valid (uses / max uses / date rules)
- Doctor selects **Follow Up** from visit menu

If follow-up is blocked, the system shows a message — patient must pay for a new consultation.

11. OPD Treatment & Drug Chart

For multi-day outpatient treatment with scheduled doses:

- **Doctor:** `/opd/treatment/:visit_id` — start treatment, prescriptions, dose schedule
- **Nurse:** `/opd/chart/:visit_id` — administer doses, drug chart
- Terminate active treatment before starting a new course on the same visit

Medication administered triggers alerts to the prescribing doctor when configured.

12. Completing a Visit

1 All orders paid and processed (or explicitly cancelled/documented).

2 Doctor reviews results and final diagnosis.

3 From visit menu: **Mark Completed**.

4 Status → **Completed**; patient leaves OPD flow.

Use **Cancel Visit** only when visit should not proceed — requires confirmation.

Record death links to death registry for in-hospital mortality documentation when applicable.

13. Screen Reference (UI)

The following panels illustrate key OPD screens. Your live system uses the React OPD queue with the same layout and actions.

15/17

14. Troubleshooting

Issue	Solution
Cannot start triage — payment required	Patient must pay consultation fee at cashier first; verify payment code validity
Consult button disabled	Record vitals first; ensure valid payment; check visit not completed
Patient missing from today's queue	Check Visit Registry filters; use Return to today's queue if carried from yesterday
Lab/Radiology rejects order	Confirm cashier payment for that order line
Follow-up blocked	Payment code expired or max uses reached — new consultation fee required
No consultation rooms on card	Configure rooms under Settings → Room configuration
Wrong doctor sees patient	Assign doctor on visit; use room assignment; check doctor queue split

15. Glossary

Term	Definition
OPD	Outpatient Department — same-day visits without admission
Queue number	Daily ticket number for waiting-screen and triage order
Payment code	Alphanumeric code proving payment for consultation or orders
Triage	Nurse assessment including vital signs before doctor
Carry-forward	Unconsulted visit moved to next day's queue automatically
Follow-up	Return visit under prior payment validity without new consult fee
Consultation room	Physical room linked to doctors for waiting-screen display
